Graphic Design There is a graphics sub-system within AutoCAD. It is able to import and export a range of graphics formats including Adobe Illustrator, Photoshop, and CorelDraw files. Architecture As part of the Windows 2000 release in May 2000, a new set of high-resolution rendered images was introduced. These are included with AutoCAD 2004 as a 3D modeler, whereas 3D modeling of architectural elements was previously possible only with the AutoCAD LT application. This feature is called AutoCAD Architecture. AutoCAD Architecture is based on the same rendering engine as 3D modeling in the previous AutoCAD version. With the introduction of AutoCAD Architecture, 2D plans were eliminated as a separate application. A plan was considered "as a collection of views, not as an independent data file." For AutoCAD Architecture, surfaces are automatically updated as you alter its data or add or remove objects. The new generation can include high-resolution real-time rendering of three-dimensional models. The renderings can be used to communicate complex designs. It is also used to create information for construction documentation. The "Plans & Elevations" feature in AutoCAD Architecture allows the user to import house plans from a standard file format, such as GDL. AutoCAD Architecture makes it possible to work on the same floorplan for many years. The plan can be updated later in the software, by importing an existing plan file from a standard file format, such as GDL. When the plan is modified, the changes are automatically applied to all views. Sound effects The sound effects in AutoCAD LT are identical to those in AutoCAD. The new AutoCAD XA sound effects provide the ability to quickly make exact sound effects using the waveform recorder. Also, the sound effects now come from a compressed file and take less memory. AutoCAD Caddie software allows the user to integrate real-time 3D graphics and sound into your design projects. It provides a non-linear 3D modeling environment that is based on real-time 3D graphics and sounds. The caddie also integrates the new software for creating visualizations from survey data. A new command in AutoCAD 2007 is "Make a New Reference", which can be used to create a 2D or 3D reference from a 3D surface or model. In addition, a new feature, "Edit Surface Properties," allows the user 5b5f913d15
