Adding external data such as material information, management information and models Creating and applying templates Facing and manipulating drawings Creation and manipulation of legends Creation and manipulation of notes Creation and manipulation of views Configuration of block properties, such as variations, views and printing properties. Design and annotation (text, arrows and annotations) Creation of ladders and tagged views AutoCAD does not support the creation of folders or child drawings. AutoCAD files are organized into a "bulkhead" structure. The "bulkhead" contains one or more sections, which in turn contains "drawings" or "slices" (a section is a single drawing). In addition to the main drawing area, an AutoCAD drawing can include alternative views. Drawings can be oriented vertically, horizontally, in portrait or landscape mode. In addition to views, you can include block types, symbols, pages, tables, indicators, and zoom levels. New functionality is added by way of optional updates. Optional updates are packaged as part of releases, usually in conjunction with a new operating system. In addition to the main drawing area, an AutoCAD drawing can include alternative views. Views can be horizontally oriented in portrait, landscape, or a variety of other views. You can zoom in and out, set the font, color, and line type for the view. Views can be arranged either in a horizontal or vertical arrangement. Horizontal and vertical views share the same properties and work similarly. However, you can arrange views in a variety of positions and relationships. You can also use views for navigation. By default, a drawing includes views that are arranged in horizontal and vertical arrangements and arranged together on a single sheet or page. A sheet can contain a number of drawings. A page contains a number of sheets. To create a new view, choose View > View Style (or use the View options). Blocks, pages, and drawings can be tagged, and tag information can be managed in an XML file. Tags allow you to link related entities together and to apply properties to selected entities or entities in a specified selection. Properties, such as color and scale, can be applied to a tag or blocks, pages, or drawings. Tag and block properties can be created and managed as XML files. To manage tag and block properties, create a tag properties file. To create a tag property file, choose File > Export Template. Choose a location for the property file 5b5f913d15
