bit more challenging to learn how to use but you'll find that you prefer it for some things, such as creating multiple documents, or opening multiple documents at once. I've had MDI applications open from each of my Vista and

Windows 7 workstations, without a hiccup. But I'd strongly recommend avoiding it, and using no borders. Netbeans can help with this. I'm not sure exactly how but you can set Netbeans to have the option of creating the style. -sudonim Thank you for the link, I had never heard of NeWbE before.

Apache2/Nginx/mod\_proxy\_http instead of plain old Ruby on Rails app? I started using nginx to serve my web app due to its superior performance. It seemed to me that using apache2 would be redundant, and the last couple of years I was using plain old apache 2. I then switched to nginx because of some time I read about its performance. Now I'm thinking whether I should go back to plain old apache 2, because I was using it for too long. Thank you! A: I have not used nginx, but I have used Apache. There is a significant amount of config in the Apache config to keep a rails server running. Instead of having to set up everything in nginx, you could just leave it to Apache. (I have done this several times) This would not affect performance unless your Rails app is very large. The reason I mentioned nginx is mainly because you would have to know it well. Nginx can be set up to proxy out to Apache. I don't believe you could
