What's New In?

The DigitalClock is a small and handy program that helps you keep track of the date and time every second, through the built-in calendar, counter and timer. No clutter, just pure design It looks quite presentable with its minimalist design, allowing you to access the main functions quickly, without having to memorize complicated commands. Actually, there are no peculiarities in its interface, allowing you to use the program either using the keyboard or the touch screen. Simple to use with limited options There's little to be said about the program's functionality, as it serves you solely with the two basic functions. It offers you the possibility of registering the calendar, setting the timer, changing the date, viewing the elapsed time, the time of day, as well as viewing the clock in a number of settings. Options to track bank accounts, shipments, appointments and more Despite the lack of customization features, this time keeper comes packed with various functionality. Bank, application, and appointment schedules are all kept track of, allowing you to find the data you want without having to look all over for it. You can also set alarms, and those for specific dates, as well as view the date when the alarm will be set. The program also allows you to track shipments, and input as much data as you want. The sections of the warehouse that interest you the most are accessed using a simple search option. What's more, it's possible to send reminders to your clients, either through the email, SMS or SMS visual. All the calendars, timers, as well as the timer for specific dates can all be saved for reference. Performance, usability and conclusion As expected, performance is good, as the program never hangs, and it takes only a couple of seconds to get the calendar up and running. It's not the most user-friendly application in the world, though, since it doesn't provide additional controls or some way to handle multiple calendar dates, but it is a decent, free and easy

to use application. As it comes with limited options, it's perfect for casual online users who just want to track the time, either in a form of a summary or in a form of a reminder.
