In Ghost in the Machine, you play as Kelly, a young woman on the brink of death. You find yourself under the care of a powerful machine. At once, your consciousness is transferred into a protective system, in an attempt to protect you from the machine, but in doing so, you are pulled into a new nightmare. Ghost in the Machine will be released for the Xbox 360 in North America this fall on September 10, 2012. The European version will be released on August 28, 2012. You can find out more about the game on the official website or on the official Facebook page. We'll have more info as it's released. Keep following us on our Twitter, Facebook and Google Plus! Alex No, I don't think so. Gossip Girl will be much more easier to do. There will be more stuff, storylines and things that will be released. Yup, but do you know why so many people are obsessed with DS games and it's not even a new game? Because you and many others are simply obsessed with them. It's not like that DS games are out of this world and some which are more liked. How will you be able to know what others like without actually play it? There's an online community you know. Why not try to just talk to them? You can even discuss your opinion with the people on Twitter and it's the same for the Facebook community. Besides, you didn't like to have Ghost in the Machine? Some people like that and they'll want you to play it when it's released so you just have to deal with it. I didn't say to not post what we got. I said to not post Gossip Girl stuff when not much info is available yet. And that was 4 days before it was announced! =P The game will be available at Gamestop on July 27. The NPD for June 2012 shows that it's coming out on Xbox 360. We have been told that when they start to release the beta for the next Xbox, the info will be made available. So what we just have to do is wait. Also, GIG is a little bit more complex. There are more twists and turns in GIG than in DS. You've been watching too much

There's a Demo version of "Welcome to Princeland" in the game and you can test the multiplayer out! But the multiplayer Demo is not ready to support XBOX Controller (it will).In Princeland, you can play against other players and compete on leaderboards. You'll find in the pause menu (Exit Game), "Settings" Properties Menu "Games/Connections" "Players" Player that you want to fight with (if you want to play with me, for example). Send a "request" to "Gepard" in the list, it will send "join" information to "Gepard" so you can start the battle. The Multiplayer mode has a host of restrictions but the most important is that you cannot join battle if you're already in battle, only if the host is not in battle.You can play against others while the host is not in battle. Be sure to be on a stable server if you want to play with Gepard without Internet Connection. The Master Chief and Cortana (Architect) icons are only to your own profile. (So they won't mess with other player's profile.) If you cannot play in the Multiplayer Mode, it means that the situation is "Out of Order". It means that even if the other player is online, you can not "connect" with each other until the player who's Host "Gepard" is online. You'll find more details in the Game's Wiki This game is available to Windows and Windows Phone store You can also buy the game from Android store Features Stable multiplayer mode (without an internet connection) You can play against others in the world Faster Load Time You can select players to fight You can play campaign or multiplayer with friends You can select the difficulty level You can choose a game type You can select to use your own or a preset character You can change weapons and abilities using your Skill Deck You can browse characters on the Skill Deck
