Intrauterine asphyxia can be divided into umbilical cord occlusion and placental insufficiency. Umbilical cord occlusion can be due to occlusion of the vessels crossing the cord (cord cross syndrome) or to hypovolemic asphyxia with postasphyxia polycythemia. Placental insufficiency is due to maternal complications of pregnancy or fetal complications of labor (preterm birth, occipitoanterior presentation, meconium stained liquor, cesarean section, maternal hypertension, infectious diseases, etc.). Load balancers receive messages, such as packets of information, or other types of data that are transmitted through the network, then direct the data to a server(s) that is or are available to handle the data. Some load balancers have a transparent mode of operation in which they intercept data transmissions and perform additional processing on data that is directed to them, before sending the data transmissions to an available server. For example, some load balancers may perform security checks on the messages, or provide other services, before forwarding the messages to the available server.Anybody who's ever been to a Holiday Inn can attest that a loyal customer base is important in the hotel business.
